

Kumar Saurabh

Engineering Lead | Principal Engineer | Distributed Systems & Cloud-Native Architect

itsksaurabh@gmail.com | linkedin.com/in/itsksaurabh | kumar-saurabh.com | India

Executive Summary

Engineering leader and principal-level infrastructure architect with 10+ years of experience building and scaling large-scale distributed systems, cloud-native platforms, and blockchain infrastructure used by millions of users worldwide. Known for combining hands-on engineering with technical leadership across platform engineering, backend systems, DevOps, Kubernetes, Go, AWS, and high-availability architectures. Recent work includes leading engineering for Shibarium, a Layer-2 ecosystem that has processed over 1 billion transactions and supports globally distributed, production-critical workloads.

Selected Leadership Impact

- Led engineering for Shiba Inu ecosystem infrastructure, spanning blockchain, payments, developer platforms, AI, gaming, and metaverse workloads.
- Helped architect and scale Shibarium beyond 1B+ transactions, 10M+ blocks, 4M daily peaks, and 175M+ addresses while improving infrastructure cost efficiency by up to 60%.
- Co-created ShibPay, a production-grade Web3 payment gateway with wallet-based payments, blockchain indexing, signed webhooks, multi-tenant architecture, and 99.99% uptime.
- Core creator and maintainer of Ketch, a CNCF ecosystem Kubernetes application delivery framework with 700+ GitHub stars.
- Built cloud-native platforms at Shipa that were later acquired by Mirantis, including Kubernetes Operators, CRDs, and multi-cloud automation.
- Led globally distributed teams, defined roadmaps and engineering standards, and mentored engineers while shipping production systems at scale.

Core Expertise

Leadership: Engineering Leadership, Technical Strategy, Team Mentorship, Roadmap Planning, Cross-Functional Collaboration | **Platform:** Distributed Systems, Cloud-Native Architecture, Platform Engineering, SRE, Observability, Event-Driven Systems | **Technology:** Go (Golang), Kubernetes, Docker, Terraform, AWS, GCP, CI/CD, PostgreSQL, MongoDB, Redis, Kafka, Blockchain

Professional Experience

Engineering Lead

Shiba Inu | Jan 2025 - Present | United States / Remote

Lead the architecture, development, and operation of the core infrastructure powering one of the world's largest blockchain ecosystems. Own technical strategy, platform architecture, engineering execution, and reliability across blockchain, payments, developer platforms, AI, gaming, and emerging technology initiatives.

- Drive platform engineering, security, reliability, and scalability initiatives across multiple products and teams.
- Mentor engineers and establish engineering standards, architecture reviews, and delivery practices for mission-critical systems.
- Partner with product and leadership teams to turn strategic goals into production-grade, cloud-native systems.

Lead Software Engineer

Shiba Inu | Jul 2023 - Dec 2024 | United States / Remote

Founding engineer on Shibarium, one of the fastest-growing Layer-2 blockchain networks, with responsibility for backend systems, cloud infrastructure, and developer services.

- Architected and scaled infrastructure supporting over 1B+ transactions, 10M+ blocks, 4M daily peaks, and 175M+ addresses.
- Designed and optimized AWS and Kubernetes infrastructure for blockchain, payments, and ecosystem services, reducing infrastructure cost by ~60%.
- Deployed and managed validator, RPC, and sentry nodes to improve network reliability, performance, and fault tolerance.
- Built CI/CD, observability, and automation tooling with Terraform, CloudWatch, Prometheus, Grafana, and Sentry.

Senior Platform Engineering Consultant

Andela | Apr 2023 - Jul 2023 | Remote

Partnered with global clients to architect and deliver high-performance backend systems, cloud-native platforms, and distributed applications.

- Built production-grade APIs, microservices, and infrastructure automation using Go, Kubernetes, Terraform, and DevOps best practices.
- Improved platform reliability, scalability, and operational efficiency for globally distributed engineering teams.
- Collaborated across time zones with startups and enterprises to translate requirements into robust technical solutions.

Senior Software Engineer - Cloud Native

Shipa (acquired by Mirantis) | Aug 2020 - Jan 2023 | Mountain View, CA / Remote

Helped build an Application-as-Code platform that simplified deployment, governance, security, and lifecycle management for cloud-native applications across Kubernetes and multi-cloud environments.

- Designed and developed core platform features in Go for multi-cloud and hybrid Kubernetes environments.
- Built and maintained Kubernetes Operators and CRDs using Operator-SDK and Kubebuilder.
- Contributed to CI/CD automation and cloud infrastructure across AWS and GCP for production-grade application delivery.
- Collaborated with customers and product teams to shape roadmap, improve usability, and deliver robust software.

Senior Backend Engineer - Golang

BNET | Jun 2018 - Jun 2020 | Hong Kong SAR / Remote

Worked at a Web3 fintech company building a high-performance trading execution platform integrated with leading cryptocurrency exchanges.

- Designed and developed scalable backend services, APIs, SDKs, and developer tooling using Go and cloud-native technologies.
- Integrated major exchange APIs for real-time data ingestion, analytics, and trade execution.
- Scaled backend infrastructure on DigitalOcean using Kubernetes, Docker, Terraform, Helm, and automated CI/CD pipelines.
- Implemented monitoring and observability with Prometheus and Grafana for reliability and performance visibility.

Backend Developer (Golang) & DevOps Consultant

Kumar-saurabh.com | Jan 2015 - Jul 2018 | Remote

Consulted with startups, scale-ups, and enterprises worldwide to design and operate distributed systems and cloud-native platforms.

- Delivered mission-critical backend systems, APIs, and cloud infrastructure with a strong focus on scalability, automation, and reliability.
- Built high-performance, cost-effective platforms using Go, Kubernetes, AWS, Terraform, and DevOps practices.
- Supported product delivery through architecture, implementation, performance tuning, and operational improvements.

Co-Founder

The Kabaadi Guy | Apr 2016 - Nov 2017 | Kota Area, India

Co-founded a sustainability-focused startup that transformed scrap and recycling collection through a mobile-first doorstep service.

- Built and scaled a technology-driven recycling platform serving thousands of customers across major Indian cities.
- Led product strategy, technology development, and operational scaling from inception through growth.
- Received media coverage and recognition for promoting environmentally sustainable waste management.
- Led a multidisciplinary team with a culture of ownership, collaboration, and continuous improvement.

Selected Projects

ShibPay - Architected a production-grade Web3 payment gateway with wallet-based payments, real-time blockchain indexing, signed webhook notifications, and multi-tenant merchant support.

Ketch - Core creator and maintainer of a Kubernetes application delivery framework with CRDs, controllers, canary deployments, and service mesh integrations.

Shib Metaverse Pixel Streaming Game Engine - Designed an event-driven Go orchestrator for on-demand Unity game servers on AWS and Kubernetes, delivering lower-cost real-time multiplayer infrastructure.

DOAct - Built a community tool for DigitalOcean to automate deployment of GitHub Actions CI/CD runners using Terraform.

Go-WazirX - Created a Go API wrapper for WazirX, widely used for exchange integration and trading automation.

Education, Awards & Recognition

Bachelor of Technology (B.Tech) in Computer Science and Engineering - Jaypee University of Engineering and Technology (NAAC A+ accredited).

University recognition for web development contributions; awarded **The Upper Case Guy** title for coding excellence.

Open-source contributor across Google, GitHub, DigitalOcean, Twilio, SendGrid, OpenFaaS, and other projects; 22K+ LinkedIn followers and multiple recommendations from engineering leaders.
